

Infection Surveillance Programs

KEEP YOUR EMPLOYEES SAFE

AMS / Infection Prevention Partners

Safely getting employees back to work, hosting conferences, and holding in-person meetings continue to be incredibly challenging due to COVID-19 and its emerging variants. Finding safer ways to re-engage your workforce and your community is your goal and ours.

AMS Infection Prevention Partners has been providing infection surveillance expertise to senior care communities. Our knowledge and understanding of infections as well as our access to best-in-class infection prevention products and platforms is unparalleled. Armed with certified infection preventionists, PCR testing, COVID-19 rapid response tests and antibody testing, we offer the most effective infection risk reduction strategies for organizations of all sizes.

RECOMMENDED INFECTION SURVEILLANCE PROGRAM

Ultimately, we provide the products and services you require, and we can build any program to suit your clinical requirements within your budget. Our recommended programs provide the following:

Infection preventionist onsite monthly to perform employee observations, training, testing and infection prevention policy review/updates

Random PCR testing of 10-percent of employees/month

PCR testing for all new employees, regardless of status (P/T, F/T, contract, volunteer, etc.)

During pandemic status: One rapid test per week per employee

During epidemic status: One rapid test every other week (or frequency you propose) per employee

Antibody testing on every employee every 90 days

Antibody testing on each new employee regardless of status

Employee access to AMS COVID Education Hotline

Let AMS Infection Prevention Partners reduce workplace infection risks so that your organization can focus on production, advising, teaching, training, meetings, sales, R&D and billing. For a quote or to learn more, please contact Ellsworth Harris by calling 443-699-3908 or emailing eharris@amsonsite.com.

ABOUT OUR PRODUCTS AND SERVICES

We'll work with your organization to design your custom infection surveillance plan.

1

Our infection preventionists are RNs and LPNs with years of experience and certifications in infection prevention; Highly accurate PCR testing (requires nasal cavity swab and about 48 hours to get results returned).

2

Rapid-response COVID testing typically provides results within 15 minutes. While not as accurate as PCR testing, it's perfect for rapid risk assessments.

3

We also offer antibody testing. This requires blood droplets and 48 hours to identify your protection against COVID-19. Three categories are identified—low antibodies (high risk), medium and high (highly protected).

4

All managed by AMS Infection Prevention Partners.
